## Abstracts

One of eight primary systems in a building. Also referred to as the 'fire protection system'. The fire safety system monitors, detects and suppresses fire hazards. The fire safety system is in some ways analogous to the autoimmune system of the human body, which removes bacteria and viruses from the human body. The fire safety system overlaps both the electrical and mechanical systems in the following ways

Fire detection equipment (such as heat and smoke detectors) is often classified as electrical components; Fire suppression equipment (such as pumps and sprinklers) is treated as part of the mechanical domain. Suppressing fires and controlling smoke transmission is a type of autoimmune response. The system also includes

components to facilitate the efficient evacuation of people from the premises, such as exit signs and emergency lighting. The fire safety system is akin to the auto-immune system in the human body.

This report elaborates the market size, market characteristics, and market growth of the Fire Safety Systems industry, and breaks down according to the type, application, and consumption area of Fire Safety Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Fire Safety Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
