## **Abstracts**

Flare Monitor is used to control the combustion efficiency of a flare flame and to prevent smoking conditions from occurring. It provides an output signal over a scale of 0 to 2000. When the flame is smoking, the output signal is above 1300. When the signal is below 700, then a low combustion efficiency is indicated. A signal between 700 and 1300 indicates a high combustion efficiency and a non-smoking flame.

This report elaborates the market size, market characteristics, and market growth of the Flare Monitoring industry, and breaks down according to the type, application, and consumption area of Flare Monitoring. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Flare Monitoring in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
