## **Abstracts**

A Flat Knitting Machines is a machine for flat knitting. Flat knitting is a method for producing knitted fabrics in which the work is turned periodically, i.e., the fabric is worked with alternating sides facing the knitter. Another method of reaching the same result is to knit alternately from right to left and left to right without turning; this back-and-forth technique requires either innate or learned ambidextrous motor skills. The two sides (or 'faces') of the fabric are usually designated as the right side (the side that faces outwards, towards the viewer and away from the wearer's body) and the wrong side (the side that faces inwards, away from the viewer and towards the wearer's body). This report elaborates the market size, market characteristics, and market growth of the Flat Knitting Machines industry, and breaks down according to the type, application, and consumption area of Flat Knitting Machines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Flat Knitting Machines in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
