Abstracts

An integrated circuit is a miniature electronic device or component. A certain process is used to interconnect components, such as transistors, resistors, capacitors, and inductors, which are required in a circuit, on a small or small piece of the semiconductor wafer or dielectric substrate, and then packaged in a single package. It becomes a microstructure with the required circuit function; all the components are structurally integrated, making the electronic components a big step toward miniaturization, low power consumption, intelligence, and high reliability.
