## Abstracts

The term “fragrance” (aka “parfum”) can be used for any number of aromatic chemical concoctions.

Flavor or flavour is the sensory impression of food or other substance, and is determined primarily by the chemical senses of taste and smell. The 'trigeminal senses', which detect chemical irritants in the mouth and throat, as well as temperature and texture, are also important to the overall gestalt of flavor perception. The flavor of the food, as such, can be altered with natural or artificial flavorants which affect these senses.

This report elaborates the market size, market characteristics, and market growth of the Flavors and Fragrances industry, and breaks down according to the type, application, and consumption area of Flavors and Fragrances. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Flavors and Fragrances in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
