Abstracts

A flexible pipe is made up of several different layers. The main components are leakproof thermoplastic barriers and corrosion-resistant steel wires. The helically wound steel wires give the structure its high-pressure resistance and excellent bending characteristics, thus providing flexibility and superior dynamic behaviour. This modular construction, where the layers are independent but designed to interact with one another, means that each layer can be made fit-for-purpose and independently adjusted to best meet a specific field development requirement.

This report elaborates the market size, market characteristics, and market growth of the Flexible Pipes for Oil and Gas industry, and breaks down according to the type, application, and consumption area of Flexible Pipes for Oil and Gas. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
