Abstracts

FLNG is a floating production device for the development of offshore natural gas fields. It is positioned at sea by mooring system and has the functions of mining, processing, liquefaction, storage, and loading and unloading of natural gas. Used in conjunction with liquefied natural gas (LNG) vessels for the exploitation of offshore natural gas fields and natural gas transportation. Traditional offshore gas field development is carried out using production platforms and submarine pipelines. Compared with the use of FLNG to develop natural gas fields, traditional development methods have certain limitations. If the gas field is too far away from the coast or the scale is small, the economic benefits of using traditional development methods will be reduced, and even investment will not be recovered. At the same time, if the laying of submarine pipelines is difficult, traditional development methods will be difficult to achieve.

This report elaborates the market size, market characteristics, and market growth of the FLNG industry, and breaks down according to the type, application, and consumption area of FLNG. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for FLNG in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
