Abstracts

A Floating House is a boat that has been designed or modified to be used primarily as a home. Some houseboats are not motorized, because they are usually moored, kept stationary at a fixed point and often tethered to land to provide utilities. However, many are capable of operation under their own power. Float house is a Canadian and American term for a house on a float (raft), a rough house may be called a shanty boat. In Western countries, houseboats tend to be either owned privately or rented out to holiday-goers, and on some canals in Europe, people dwell in houseboats all year round. Examples of this include, but are not limited to, Amsterdam, London, and Paris.

This report elaborates the market size, market characteristics, and market growth of the Floating House industry, and breaks down according to the type, application, and consumption area of Floating House. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
