Abstracts

The FLNG is one of the methods for developing offshore natural gas fields in which the natural gas is extracted from the seabed, then processed, liquefied, and stored on a floating vessel that will be moored permanently over the field. The stored liquefied natural gas (LNG) will be offloaded to a tanker and taken directly to the market.

This report elaborates the market size, market characteristics, and market growth of the Floating Liquefied Natural Gas industry, and breaks down according to the type, application, and consumption area of Floating Liquefied Natural Gas. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Floating Liquefied Natural Gas in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
