Abstracts

Floating liquefied natural gas (FLNG) terminals refers to water-based liquefied natural gas (LNG) operations terminals employing technologies designed to enable the development of offshore natural gas resources. Floating above an offshore natural gas field, the FLNG facility produces, liquefies, stores and transfers LNG (and potentially LPG and condensate) at sea before carriers ship it directly to markets.

This report elaborates the market size, market characteristics, and market growth of the Floating LNG Terminals industry, and breaks down according to the type, application, and consumption area of Floating LNG Terminals. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Floating LNG Terminals in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
