Abstracts

Floating production storage and offloading vessels are offshore production facilities that club both storage and processing equipment for produced hydrocarbons. The basic design of most floating production storage and offloading vessel comprises a boat molded vessel with processing equipment or topsides on the vessel's deck and hydrocarbon storage underneath the dual hull. Floating production storage and offloading vessels store oil or gas after processing and periodically shuttle it to tankers. This report elaborates the market size, market characteristics, and market growth of the Floating Production Storage and Offloading (FPSO) industry, and breaks down according to the type, application, and consumption area of Floating Production Storage and Offloading (FPSO). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Floating Production Storage and Offloading (FPSO) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
