Abstracts

The flow computer devices are used in the oil and gas industries for the measurement of liquid and gas supplies. Flow computers take inputs from flow meters, temperature transmitters, and pressure transmitters, and then calculate exact flow of liquid or gas running through the pipelines. It calculates the exact amount of flow with the help of the interfaced devices and records the data, important events, and alarms. Then, that data is transferred to external computers or workstations for inspecting, managing, and accounting.

This report elaborates the market size, market characteristics, and market growth of the Flow Computer industry, and breaks down according to the type, application, and consumption area of Flow Computer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Flow Computer in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
