Abstracts

Fluorite is a mineral whose main component is calcium fluoride (CaF_2), which contains more impurities. The calcium is often replaced by rare earth elements such as lanthanum and cerium, in addition to a small amount of Fe_2O_3 , SiO_2 and trace amounts of Cl, O₃ and He. Fluorite in nature often has a bright color, and its hardness is lower than that of a knife.

This report elaborates the market size, market characteristics, and market growth of the Fluorspar industry, and breaks down according to the type, application, and consumption area of Fluorspar. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Fluorspar in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
