## Abstracts

The monitor can be used to project water or fire fighting foam (or in some cases even dry chemical powder). Water monitors typically only project water, while foam monitors can be used to project water and foam. Projectors that project foam require special nozzles that allow for the induction of foam concentrate (and in the case of inhaled foam nozzles, the growth of the foam solution). Therefore, the difference between water and foam monitors is primarily due to the nozzles mounted on the monitor body (and the monitor body is common to both).

This report elaborates the market size, market characteristics, and market growth of the Foam Monitor industry, and breaks down according to the type, application, and consumption area of Foam Monitor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Foam Monitor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
