## Abstracts

Forged steel valves are created using a forging method that involves shaping steel metals and alloys while they're in their solid form. Heat and industrial-size tools deliver compressive forces to bend the steel metals and alloys, and dies are used to cut and shape the materials to create specific valves. Forging steel valve can be divided into forged steel check valves, forged steel globe valves and forged steel gate valves. This report elaborates the market size, market characteristics, and market growth of the Forging Steel Valve industry, and breaks down according to the type, application, and consumption area of Forging Steel Valve. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Forging Steel Valve in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
