## **Abstracts**

Fourier Transform Infrared (Ftir) Microscope is a well-established method for the chemical identification of particles or contaminants and for visualizing the distribution of certain substances in complex compounds. Due to the usage of modern focal plane array detectors, this technology has advanced to a new imaging technique during the last few years. It allows for the measurement of even large sample areas with a very high lateral resolution within a few minutes.

This report elaborates the market size, market characteristics, and market growth of the Fourier Transform Infrared (Ftir) Microscope industry, and breaks down according to the type, application, and consumption area of Fourier Transform Infrared (Ftir) Microscope. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Fourier Transform Infrared (Ftir) Microscope in a special period.
