Abstracts

Brushless DC electric motor (BLDC motors, BL motors) also known as electronically commutated motors (ECM, EC motors), or synchronous DC motors, are synchronous motors powered by DC electricity via an inverter or switching power supply which produces an AC electric current to drive each phase of the motor via a closed loop controller. The controller provides pulses of current to the motor windings that control the speed and torque of the motor.

This report elaborates the market size, market characteristics, and market growth of the Frameless Brushless DC Motors industry, and breaks down according to the type, application, and consumption area of Frameless Brushless DC Motors.
