Abstracts

Friction welding is a solid-state welding process. The mechanical friction between the workpieces in relative motion to one another generates heat along with an additional lateral force called upset. This force is generally applied to plastically displace and fuse the materials. Friction welding is a forge welding technique, wherein no melting occurs unlike traditional processes like fusion welding.

This report elaborates the market size, market characteristics, and market growth of the Friction Welding Machine industry, and breaks down according to the type, application, and consumption area of Friction Welding Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Friction Welding Machine in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
