Abstracts

Fuel cell system designs range from very simple to very complex depending upon the fuel cell application and the system efficiency desired. A fuel cell system can be very efficient with just the fuel cell stack and a few other balance-of-plant components or may require many outside components to optimize the fuel cell performance. The fuel cell catalyst, membranes, and flow-field plates are very important areas for fuel cell improvement, but stack optimization is as equally important. This post focuses on selecting and designing the fuel and electrical subsystems.

This report elaborates the market size, market characteristics, and market growth of the Fuel Cell System industry, and breaks down according to the type, application, and consumption area of Fuel Cell System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Fuel Cell System in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
