Abstracts

A fuel cell uses the chemical energy of hydrogen or another fuel to cleanly and efficiently produce electricity. If hydrogen is the fuel, electricity, water, and heat are the only products. Fuel cells are unique in terms of the variety of their potential applications; they can provide power for systems as large as a utility power station and as small as a laptop computer.

This report elaborates the market size, market characteristics, and market growth of the Fuel Cells industry, and breaks down according to the type, application, and consumption area of Fuel Cells. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Fuel Cells in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
