## Abstracts

Functional fitness equipment allows you to exercise in free form, allowing your body to move freely in all aspects.

Bars and plates are widely used by enthusiasts, and they are addicted to dynamic lifts, including snatching and cleaning, especially for heavy weights and high repetition rates. While most athletes prefer standard sized rods, some have smaller diameters. Smaller diameter rods are especially suitable for female fitness enthusiasts, and their participation rate has increased significantly recently.

Rowing machines have recently witnessed the popularity of combined machines that combine cardiovascular elements with anti-muscle construction. The easy integration of the rowing machine and the low impact properties have attracted the interest of older fitness enthusiasts.

This report elaborates the market size, market characteristics, and market growth of the Functional Fitness Equipment industry, and breaks down according to the type, application, and consumption area of Functional Fitness Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Functional Fitness Equipment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
