## Abstracts

Laser Marking is a marking method which utilizes laser light to mark materials using a fine spot diameter. A laser marking machine can be thought of as three main parts: a laser, a controller, and a surface. The laser is like a pencil - the beam emitted from it allows the controller to trace patterns onto the surface. The controller direction, intensity, speed of movement, and spread of the laser beam aimed at the surface. The surface is picked to match what the laser can act on.

This report elaborates the market size, market characteristics, and market growth of the Galvo Laser Marking Machine industry, and breaks down according to the type, application, and consumption area of Galvo Laser Marking Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
