## Abstracts

A gas engine is basically an internal combustion engine that generates impulse power by utilizing a variety of gases as fuel. The gas engine is usually applied as stationary continuous generation units but also operate as peaking plants and in greenhouses to meet fluctuations in limited electricity demand. The gas engine can be regulated with various types of gas, such as shale gas, natural gas, landfill gas, syngas and sewage gas. The gas engine can produce electricity in parallel with the local electricity grid, in island mode operation or for power generation in remote areas. The gas engine is designed for maximum electrical & thermal efficiency, high reliability & availability, and low operation & service costs.

This report elaborates the market size, market characteristics, and market growth of the Gas Engines industry, and breaks down according to the type, application, and consumption area of Gas Engines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
