Abstracts

Geocells are strong, lightweight, three dimensional systems fabricated from ultrasonically-welded High Density Polyethylene (HDPE) strips that are expandable on-site to form a honeycomb-like structure. Geocells are filled with compact non-cohesive soils which are confined within the cellular walls. Geocells are also known as cellular confinement systems. They are three dimensional mats that resemble a honey comb structure and is made of high density polyethylene, polypropylene, polyester or other polymeric alloys. Geocells are mainly used in the construction sector in the areas related to earth reinforcement, slope protection, channel protection, load support and tree root protection.

This report elaborates the market size, market characteristics, and market growth of the Geocells industry, and breaks down according to the type, application, and consumption area of Geocells. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Geocells in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
