Abstracts

Geospatial analysis refers to a broad range of activities, which emphasize on applying various techniques to data that comprises of geographical or space-related characteristics. It can be termed as the process of accruing, displaying and filtering of real-time, historical and satellite-based imageries, which can be moulded into geographic data, either in the form of coordinates or in terms of landmarks (postal codes, addresses or identifiers).

This report elaborates the market size, market characteristics, and market growth of the Geospatial Analytics industry, and breaks down according to the type, application, and consumption area of Geospatial Analytics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
