Abstracts

A fiberglass mat (or glass yarn) is a nonwoven material composed of randomly sized glass fibers that are evenly distributed and bonded together by an organic additive. The mat forming process produces a strong, stable and heat resistant fabric. Customers can specify the weight of the glass filament mat and other physical properties such as stiffness and porosity.
This report elaborates the market size, market characteristics, and market growth of the Glass Mat industry, and breaks down according to the type, application, and consumption area of Glass Mat. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
