## Abstracts

A glow stick is a self-contained, short-term light-source. It consists of a translucent plastic tube containing isolated substances that, when combined, make light through chemiluminescence, so it does not require an external energy source. The light cannot be turned off and can only be used once. Glow sticks are often used for recreation, but may also be relied upon for light during military, police, fire, or EMS operations. This report elaborates the market size, market characteristics, and market growth of the Glowsticks industry, and breaks down according to the type, application, and consumption area of Glowsticks.
