Abstracts

GMO seeds offer premium characteristics to increase agricultural output, enable longer shelf life, and offer greater resistance to insects. Manufacturers of GMO crops and seeds are developing new GM crops that not only offer resistance to pests and diseases, but also offer increased tolerance to herbicides such as vitamin A-fortified rice and wheat, pesticides such as cowpea and beans, and drought tolerant biofortified bananas and maize. GMO crops and seeds are not proven to be harmful to humans, but research suggests that modified crops may negatively impact food chains and the environment. These factors have led to a mixed response among farmers about the adoption of GMO crops and seeds.
This report elaborates the market size, market characteristics, and market growth of the GMO Crops and Seeds industry, and breaks down according to the type, application, and consumption area of GMO Crops and Seeds. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for GMO Crops and Seeds in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
