Abstracts

PON (Passive optical network) based FTTH access network is a point-to-multipoint, fiber to the premises network architecture in which unpowered optical splitters are used to enable a single optical fiber to serve 32-128 premises. FTTH network exploits the low attenuation and high bandwidth of single-mode fiber to provide many times more bandwidth than currently available with existing broadband technologies. GPON FTTH (Fiber To The Home) is very popular because it is cheap and allows people to download legal Video On Demand damn fast.
