Abstracts

GPS Anti-Jamming protects GPS receivers from interference and intentional jamming. By the time the GPS signal reaches the Earth's surface is weak and is susceptible to being overcome by higher power Radio Frequency (RF) energy. Even a small jammer of about 10 Watts power can disrupt an unprotected C/A Code receiver for about 30 kilometres (line of sight). GPS Anti-Jamming uses power minimization to reduce the effect of interference and jamming so that the GPS receiver can continue to operate correctly. GPS technology has revolutionized modern warfare. Military organizations regularly depend on satellite technology for accurate positioning, timing and communications.

This report elaborates the market size, market characteristics, and market growth of the Gps Anti-Jamming industry, and breaks down according to the type, application, and consumption area of Gps Anti-Jamming. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
