Abstracts

Global positioning system (GPS) is a global navigation satellite system that provides information about time and geolocation to the receiver anywhere on or near the earth where four or more GPS satellites must be visible. This system operates independently without integration of the internet reception, but the use of internet helps to improve the usefulness of the GPS positioning information. The GPS system is capable of providing critical positioning to the military, commercial, and civil users worldwide. GPS continuously transmits current position and time to the receiver. It is used in the various applications such as traffic signal timing, time transfer, and synchronization of cell phone base stations.

This report elaborates the market size, market characteristics, and market growth of the GPS industry, and breaks down according to the type, application, and consumption area of GPS. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for GPS in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
