Abstracts

Graphene is a one-atom-thick layer of carbon atoms arranged in a hexagonal lattice. It is the building-block of Graphite, but graphene is a remarkable substance on its own - with a multitude of astonishing properties. Graphene could present several new features for energy-storage devices, such as smaller capacitors, completely flexible and even rollable energy-storage devices, transparent batteries, and high-capacity and fast-charging devices. Graphene is also very useful in a wide range of batteries including redox flow, metal–air, lithium–sulfur and, more importantly, lithium-ion batteries.

Graphene can be chemically processed into various forms suitable for both the positive and negative electrodes, enabling the fabrication of an all-graphene battery with an ultrahigh energy density.

This report elaborates the market size, market characteristics, and market growth of the Graphene for Battery industry, and breaks down according to the type, application, and consumption area of Graphene for Battery. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Graphene for Battery in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
