Abstracts

Loss-in-weight feeders can be used for both small to medium feeding ranges. They work with extreme precision under optimum ambient conditions. They are very flexible and can handle bulk solids, liquids and even poorly flowing products. They are used in many continuous processes such as feeding extruders requiring a high level of short-term feeding consistency. They are also used in the food industry and in laboratories by means of appropriate storage containers and adapted feeding devices. The design varies from compact constructions to modular concepts depending on usage.

This report elaborates the market size, market characteristics, and market growth of the Gravimetric Feeder (loss-in-weight) industry, and breaks down according to the type, application, and consumption area of Gravimetric Feeder (loss-in-weight). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Gravimetric Feeder (loss-in-weight) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
