Abstracts

A grease trap is a plumbing device (a type of trap) before they enter the wastewater treatment system and solid. Ordinary wastewater contains a small amount of oil that enters the septic tank and treatment facility to form a scum layer. This scum layer is very slowly digested and decomposed by microorganisms in anaerobic digestion. This report elaborates the market size, market characteristics, and market growth of the Grease Traps industry, and breaks down according to the type, application, and consumption area of Grease Traps. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Grease Traps in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
