Abstracts

A grinding machine is a machine for material removal with geometrically non-defined, bonded cutting edges, where the relative movement between tool and workpiece is rotational or linear. The machine further must provide relative feed and positioning movements between tool and workpiece. The movements between tool support (spindle) and workpiece follow a defined geometrical path – it is path defined.
This report elaborates the market size, market characteristics, and market growth of the Grinding Machines industry, and breaks down according to the type, application, and consumption area of Grinding Machines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
