Abstracts

For both men and women, androgenetic alopecia and telogen effluvium (TE) are the most common causes of hair loss. Androgenetic alopecia, also known as male or female pattern baldness, is caused by genetics. Dihydrotestosterone (DHT) is a hormone found in men and women that is involved in this type of hair loss and shortens the lifespan of each hair follicle. As men and women age, they produce more DHT, causing hair loss or thinning.

The other cause of hair loss, telogen effluvium (TE), occurs when more hair than usual is in the dying or shedding phase of the hair cycle. While this type of hair loss is typically more temporary for both sexes, it can be brought on by reasons including pregnancy, severe illness, extreme stress, thyroid disorders, certain medications, and diet and hormonal changes.

With both sexes, hair loss due to TE is more sudden while androgenetic alopecia causes hair to thin more slowly.

This report elaborates the market size, market characteristics, and market growth of the Hair Loss Men and Women industry, and breaks down according to the type, application, and consumption area of Hair Loss Men and Women. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
