Abstracts

Although current modern enterprises have generally used automatic insertion and automatic welding production processes, trial production and production of small-volume products and the production of products with special requirements and high reliability (such as the manufacture of rockets and artificial satellites in aerospace technology) are currently also using hand soldering. Even if the miniaturization of the printed circuit board structure adopts automatic welding products in large quantities, there are still a certain number of welding points that require hand soldering.

This report elaborates the market size, market characteristics, and market growth of the Hand Soldering industry, and breaks down according to the type, application, and consumption area of Hand Soldering. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hand Soldering in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
