Abstracts

The process of hardening and tempering is a treatment for various components in many industrial sectors. Hardening is a process of heating followed by cooling generally fast for increase hardness and mechanical strength of steel.

To this end, the steel is heated to a temperature slightly higher than the upper critical (between 850-900?C) and then cooled more or less quickly (depending on the characteristics of steel) in a medium such as oil, air, water, water mixed with soluble polymers, etc.

This report elaborates the market size, market characteristics, and market growth of the Hardening Machines industry, and breaks down according to the type, application, and consumption area of Hardening Machines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hardening Machines in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
