Abstracts

Application programming interfaces (APIs) provide the means for one software program to access the services of another. Given the healthcare industry's history with closed health IT systems and siloed data stores, many subject-matter experts and innovators continue to tout the potential of widespread API use in healthcare to enable health data exchange and interoperability. In a health care market where APIs are commonplace, patients could have easy, efficient access to their own data, which would help them understand their own health and make more informed choices.

This report elaborates the market size, market characteristics, and market growth of the Healthcare API industry, and breaks down according to the type, application, and consumption area of Healthcare API. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Healthcare API in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
