## **Abstracts**

Healthcare robots are a blend of medicine and technology. These robots aid surgeons in performing surgeries with almost perfect precision. These are considered as an alternative method to minimal invasive surgeries. In the recent past, considerable development has been achieved in the global healthcare robots market as robotics is being increasingly adapted by the medicine industry to augment healthcare workers including therapists, though this can never be an alternate for humans, nor can they perform autonomously owing to patient safety concerns. However they help doctors to considerably leverage their analytical and decision-making skills, while extending their physical abilities.

This report elaborates the market size, market characteristics, and market growth of the Healthcare Robotics industry, and breaks down according to the type, application, and consumption area of Healthcare Robotics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Healthcare Robotics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
