Abstracts

Heat interface units (HIU) are typically installed in large apartment complexes with multiple dwellings. Rather than each dwelling being fitted with a boiler, a central boiler provides heating and domestic hot water energy to the entire complex. Heat interface units (HIU) act as a bridge between the central boiler and the heating and hot water systems of the individual apartments.

This report elaborates the market size, market characteristics, and market growth of the Heat Interface Units industry, and breaks down according to the type, application, and consumption area of Heat Interface Units. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Heat Interface Units in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
