Abstracts

Perioperative hemodynamic optimization of the high-risk surgical patient is associated with reduced postoperative morbidity and mortality. The hemodynamic parameters to be optimized (using goal-directed algorithms) encompass preload, contractility, afterload, volume responsiveness, and end-organ perfusion. Current hemodynamic monitors facilitate multi-modal monitoring of these macro-hemodynamic targets. This review focuses on the variety of invasive, minimally invasive, and noninvasive hemodynamic monitors available to the clinician.

This report elaborates the market size, market characteristics, and market growth of the Hemodynamic Monitoring Devices industry, and breaks down according to the type, application, and consumption area of Hemodynamic Monitoring Devices. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hemodynamic Monitoring Devices in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
