Abstracts

The potential applications of High Altitude Pseudo Satellites, also called High Altitude Platform Stations (HAPS). HAPS are aircraft positioned above 20 km altitude, in the stratosphere, for very-long-duration flights counted in months and years. These unmanned aircraft may be airplanes, airships or balloons. HAPS could offer advantages and complementary applications over satellites, terrestrial infrastructures and Remotely Piloted Aircraft Systems (RPAS), at relatively low cost.

This report elaborates the market size, market characteristics, and market growth of the High-altitude Pseudo Satellites (HAPS) industry, and breaks down according to the type, application, and consumption area of High-altitude Pseudo Satellites (HAPS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High-altitude Pseudo Satellites (HAPS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
