Abstracts

Borosilicate glass is a type of glass with the main glass-forming constituents of silica and boron trioxide. Borosilicate glasses are known for having very low coefficients of thermal expansion, making them resistant to thermal shock, more than any other common glass. Such glass is less subject to thermal stress and is commonly used for the construction of ampoule bottle, and etc.

This report elaborates the market size, market characteristics, and market growth of the High Borosilicate Glass industry, and breaks down according to the type, application, and consumption area of High Borosilicate Glass. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High Borosilicate Glass in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
