Abstracts

A high-integrity pressure protection system (HIPPS) is a type of safety instrumented system (SIS) designed to prevent over-pressurization of a plant, such as a chemical plant or oil refinery. The HIPPS will shut off the source of the high pressure before the design pressure of the system is exceeded, thus preventing loss of containment through rupture (explosion) of a line or vessel.

This report elaborates the market size, market characteristics, and market growth of the High-Integrity Pressure Protection System industry, and breaks down according to the type, application, and consumption area of High-Integrity Pressure Protection System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High-Integrity Pressure Protection System in a special period.
