Abstracts

High-performance computing as a service (HPCaaS) is the provision of high-level processing capacity to customers through the cloud. HPCaaS provides the resources required to process complex calculations, working with massive amounts of data through existing platforms. The model makes compute-intensive processing possible for those without the investment capital required for the skilled staff, hardware and development of a high-performance computing platform. The same workloads for scientific computing and big data analysis that are run on local high-performance computing (HPC) systems can be run on HPCaaS.

This report elaborates the market size, market characteristics, and market growth of the High-Performance Computing as a Service (HPCaaS) industry, and breaks down according to the type, application, and consumption area of High-Performance Computing as a Service (HPCaaS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High-Performance Computing as a Service (HPCaaS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
