## Abstracts

A high pressure grinding roll, often referred to as HPGRs or roller press, consists out of two rollers with the same dimensions, which are rotating against each other with the same circumferential speed. The special feeding of bulk material through a hopper leads to a material bed between the two rollers. The bearing units of one roller can move linearly and are pressed against the material bed by springs or hydraulic cylinders.

This report elaborates the market size, market characteristics, and market growth of the High-Pressure Grinding Roller industry, and breaks down according to the type, application, and consumption area of High-Pressure Grinding Roller. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High-Pressure Grinding Roller in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
