Abstracts

High pressure processing (HPP), also known as pascalization, is a technology used in the sterilization of a wide range of food products. HPP is a type of freezing pasteurization in which the products are introduced into a container subjected to close to the maximum level of isostatic pressure exerted by water. The high pressure eliminates the bacteria, yeast, molds, parasites, and viruses present in the food, extending the life of the product and guaranteeing its safety.

This report elaborates the market size, market characteristics, and market growth of the High Pressure Processing (HPP) Food industry, and breaks down according to the type, application, and consumption area of High Pressure Processing (HPP) Food. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High Pressure Processing (HPP) Food in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
