Abstracts

A backplane (or 'backplane system') is a group of electrical connectors in parallel with each other, so that each pin of each connector is linked to the same relative pin of all the other connectors, forming a computer bus. It is used as a backbone to connect several printed circuit boards together to make up a complete computer system.

Backplanes commonly use a printed circuit board, but wire-wrapped backplanes have also been used in minicomputers and high-reliability applications.

The emergence of faster data rates, and decreasing signal rise times, requires better performing, high speed connectors. High speed backplane connectors provides system designers the flexibility they require to solve their specific performance challenges.

This report elaborates the market size, market characteristics, and market growth of the High-Speed Backplane Connectors industry, and breaks down according to the type, application, and consumption area of High-Speed Backplane Connectors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for High-Speed Backplane Connectors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
