## Abstracts

Human machine interface (HMI) software gives machine operators a way to interact with and manage a system. This interaction is through a graphical user interface (GUI), which facilitates information exchange and communication between two types of HMIs; a supervisory level and a machine level. Generally, HMI software is designed for either machine level HMI or supervisory level HMI, with applications suitable for both types. These software applications are expensive at the outset, but can lower long-term costs and reduce redundancies in the long run.

This report elaborates the market size, market characteristics, and market growth of the HMI Software industry, and breaks down according to the type, application, and consumption area of HMI Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for HMI Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
